PROFESSIONAL EXPERIENCE	AI MAX 06/2024 – 09/2024			
	AI Application Intern			
	- Perform data mining and preprocessing for quality dataset preparation. - Deploy and optimize large language model (LLM) APIs for application integration. - Fine-tune LLMs for specific domains to improve performance. - Research and propose AI-driven solutions using LLM technologies for real-world challenges.			
	VietRad 09/2024 – 06/2025			
	Research			
	- Solve advanced image processing and medical imaging problems, including enhancement, segmentation, and analysis - Develop and implement medical intake systems for efficient patient data acquisition and workflow integration - Apply AI techniques to medical image data to support diagnostics and clinical decision-making			
EDUCATION	VNU Hanoi University of Science 2021 – 2025			
	Bachelor of Mathematic and Computer science			
ACTIVITIES	HUS Applied Mathematics Informatics Club		DataFlow 2025: Mastering the DataWave	
	Led a mathematics and computer science academic club through mentoring, workshops, and collaborative projects.		Head of Organizing Committee for the Data Analysis and Processing in Economics Competition (Jan–Mar 2025)	
HARD SKILLS	Machine learning		Deep Learning	
	I am knowledgeable about and capable of implementing many of the widely-used machine learning models in practice today.		I possess a strong proficiency in utilizing and implementing various deep learning architectures within the PyTorch and TensorFlow frameworks.	
	Data mining and processing		Computer Vision	
	I possess the skills to carry out data mining, along with data preprocessing and analysis tasks.		I possess the expertise to address challenges associated with computer vision.	
SOFT SKILLS	Time Management	Communication	Collaboration and Teamwork	Multi-tasking

PERSONAL PROJECT

GOOGLE MEET CHAT READING BOT

github.com/Grizmo2610/GoogleMeetChatReadingBot

- Used Selenium and WebDriver to automate login into a Google account and access a Google Meet room
- Navigated the Google Meet interface to open the chat section and extract live messages
- Processed and converted chat messages to speech using text-to-speech (TTS) technologies

IMAGE SEGMENTATION

github.com/Grizmo2610/ImageSegmentations

- Designed and implemented a UNet architecture using PyTorch tailored for image segmentation tasks
- Prepared and preprocessed the COCO2017 dataset to fit the model's input requirements
- Trained the UNet model on COCO2017, optimizing hyperparameters to achieve around 80% accuracy

ANIME RECOMENDATIONS SYSTEM

kaggle.com/grizmo/anime-recomendations-system

- Implemented a movie recommendation system using collaborative filtering to capture user preferences
- Combined user-based and item-based filtering methods to enhance recommendation accuracy
- Incorporated content similarity features to complement collaborative filtering and improve results

FACE ATTENDANCE SYSTEM

github.com/Grizmo2610/Face-Attendance-System

- Developed a face recognition system using deep learning algorithms for feature extraction
- Implemented user registration by storing facial images and features in a database
- Deployed real-time face authentication for user identification and verification during interaction

GOOGLE SLIDE TRANSLATE AUTOMATIC

github.com/Grizmo2610/GoogleSlideTranslate

- Developed an automated translation tool for Google Slides using large language models (LLMs)
- Utilized the Google Slides API to programmatically read slide content and write translated text
- Integrated LLM-based translation to support multiple languages with high accuracy
